## **TECHNICAL AND SERVICE BULLETIN**

**No.:** 10

**Date:** SEPTEMBER 1984

### ***CAUTION: DO NOT USE VARN SUPER RUBBER REJUVENATOR AND VK-25 RUBBER REJUVENATOR ON KOMPAC ROLLERS.***

Until further notice, any SUPER RUBBER REJUVENATOR and VK-25 manufactured after February 1984, should NOT be used on Kompac rollers. After extensive testing, initiated after some field complaints, our lab has determined that these products will swell Kompac rollers to the point of distortion. The Kompac rollers are classified in the industry as "precision rollers" and are unlike any roller found in a conventional ink roller system. It is for this reason, that we are continually testing products for their compatibility with Kompac. Remember, Super Rubber Rejuvenator and VK-25 are still the best rejuvenators for conventional rollers except urethane.

Please advise your customers immediately of this change, and we apologize for any inconvenience.
