

KOMPAC TECHNICAL UPDATE

NO: 51
DATE: FEBRUARY 1995
TO: ALL KOMPAC
DEALERS
SUBJECT: END FRAME
BEARING
CHANGE

Effective January 1, 1995, Graph Tech incorporated sealed end frame bearings on all HMD 700 and HMD 470 Kompac units produced. This improvement will prevent moisture from getting into the bearing, causing possible failure. If you are experiencing this problem and the Kompac unit is still within the one year warranty period, you can replace these parts under the standard warranty claim procedure. Labor, however, will not be credited. If a Kompac unit is past the warranty period, you can upgrade to the new style sealed end frame bearings for a flat rate charge of \$200.00. There will be no dealer discount for these parts. Old style parts are no longer available.

To order, refer to Graph Tech kit number below.

KOMPAC MODEL

HMD 700, HMD 470

NEW PART NUMBER

98330

NOTE: For identification, old style form rollers are color-coded purple and new style form rollers are color-coded white.

Remember to use only genuine Kompac parts.

Thank you for your support.
