DESIGN CHANGE - Seal Backing Plate Assembly Part Number 922502

This design change incorporates 5 modifications which improve product reliability and performance.

1. The seal spring is securely fastened using a rivet instead of solder which was prone to failure.
2. The seal spring is a heavier gage steel which results in a more uniform seal wear and should add longer seal life.
3. A loop was added to the end of the seal spring which allows for convenient lifting when the seal sets are replaced.
4. A retaining pin is added to prevent the seal backing plate from contacting the Kompac II form roller. This will eliminate accidental damage to the form roller if the seals are used beyond the specified limits.
5. Spring cover reduces plate scratching and prevents ink and paper lint from clogging the spring coils.

Note - This nut must be installed after the unit is assembled.

REMEMBER -

This kit is available to improve performance on all Kompac II's serial number 4000 and up. Seal backing plate assemblies (Part No. 922502) are available from Graph Tech. Call 1-800-221-0235. Retail cost \$34.50 per set.
